

Capability Statement

The background image shows a large-scale industrial construction project, likely a ship or a large vessel. A prominent feature is a tall, lattice-structured crane or derrick extending from the upper part of the structure. The scene is filled with various levels of scaffolding, walkways, and structural components. The lighting is dramatic, with a strong orange-red glow on the left side and a teal-blue glow on the right side, creating a high-contrast, industrial atmosphere. The overall composition is vertical, emphasizing the height and scale of the equipment.

MoorMarine is a leading Australian based harbour equipment supplier and service provider. With our partners, and extensive in-house experience and engineering capabilities, we offer our customers cost effective and high quality harbour equipment solutions.

Our Vision

To be regarded as a leading harbour equipment solutions provider by our customers, industry peers and other stakeholders.

Our Mission

To consistently surpass the high standards of quality and service demanded by our customers by providing unrivaled level of service and support.

MoorMarine Presence

Our head office located in Perth WA, and branches in Adelaide SA and Kuala Lumpur, Malaysia.

Our customers include commercial ports, iron ore, aluminium and coal export terminals as well as oil and gas facilities.

Product Range

MoorMarine partners with quality suppliers to provide a comprehensive range of products for the modern harbour.

Marine Fenders

Large range of fender systems including pneumatic, tug and floating fenders. We also provide spare ancillary equipment such as UHMWpads, nuts and bolts, chains etc.

Marine Bollards
